Database URL	N/A (Google Datastore)
Database Username	N/A (Google Datastore)
Database Password	N/A (Google Datastore)

Addition information, anything to help with executing or grading of the current milestone
As mentioned in the software stack approval email, we are using Google App Engine which doesn't give us direct access to the VM through SSH. In addition, we will use Google Cloud Datastore, a NoSQL database to store user specific information since it's the only one with a free tier quota. Like GAE, GCD also doesn't have a direct user login. Both GAE and GCD can be accessed through the Google Cloud Platform dashboard: https://console.cloud.google.com/home/dashboard?project=mesekai . I've added both of you (hjsonghjsong@gmail.com, wiam.boumaazi@gmail.com) as Viewers to the project. Let me know if you would like your project roles upgraded, or any additional information.
